

MS Word Interface and Useful Tools in MS Word

Objectives

- Familiarize some of the important features in MS Word such as References, Mail Merge, Find and Replace, etc.
- Demonstrate how to use header and footer.
- Demonstrate how to use the References Tab in MS Word.
- Demonstrate how to use the Mail Merge in MS Word
- Demonstrate how to use the "Find and Replace" tool.

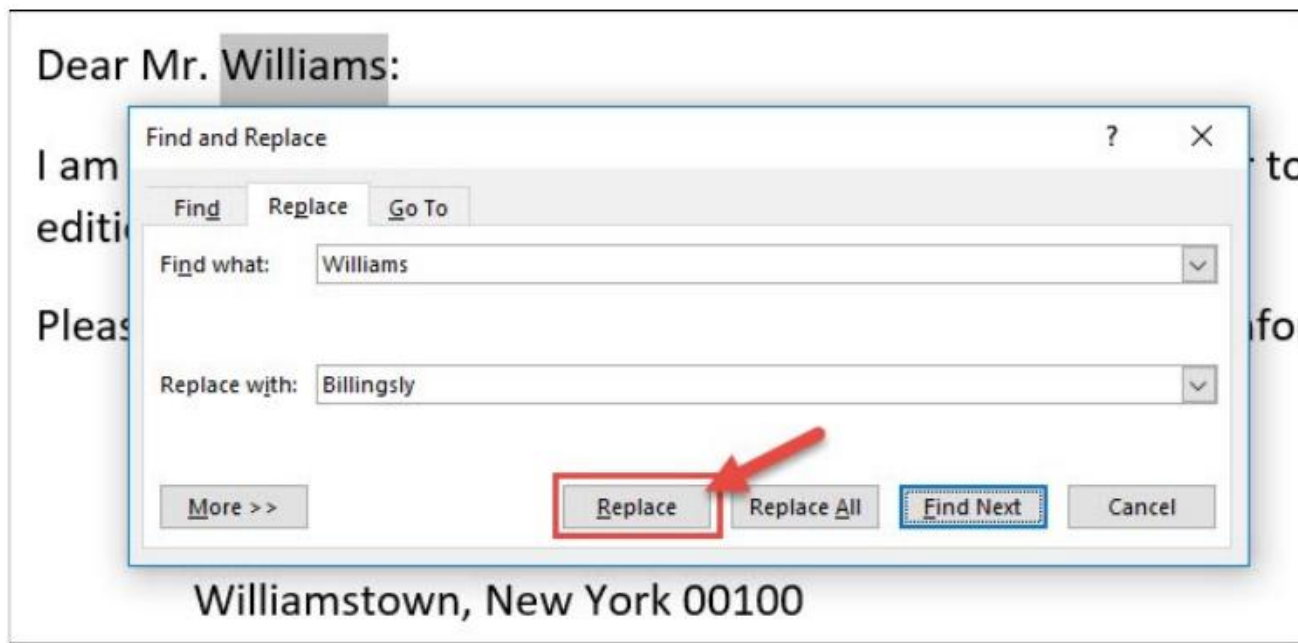

Find and Replace

How to Find and Replace Text in Microsoft Word

- Switch over to the “Home” tab on Word’s Ribbon and then click the “Replace” button.
- This opens Word’s Find and Replace window.
- In the “Find What” box, type the word or phrase you want to locate.
- If you only want to find text in your document, you can go ahead and click the “Find Next” button to have Word jump to the next occurrence of that word.
- Keep clicking it to browse through all the results.

How to Find and Replace Text in Microsoft Word

How to Find and Replace Text in Microsoft Word

- You may refer to this link if you want to explore more on the feature.

Inserting a Watermark

What is a watermark?

- A watermark is a logo, text, or pattern that is intentionally superimposed onto another image. Its purpose is to make it more difficult for the original image to be copied or used without permission.

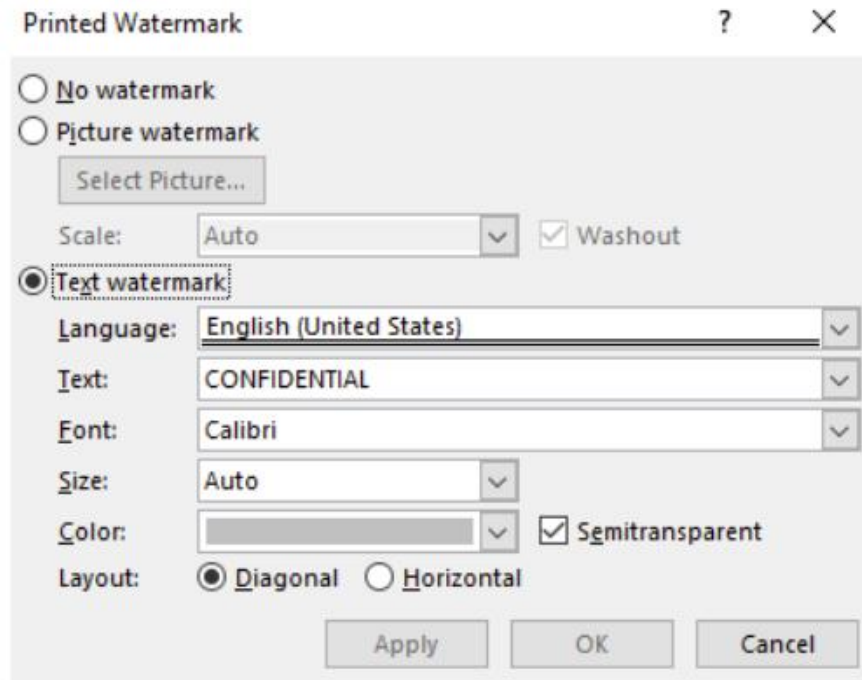

Inserting a Watermark

- You can add a watermark to documents in Word by going to Design>Watermark. (In older versions of Word, it is often found in the Page Layout tab rather than the Design tab.)

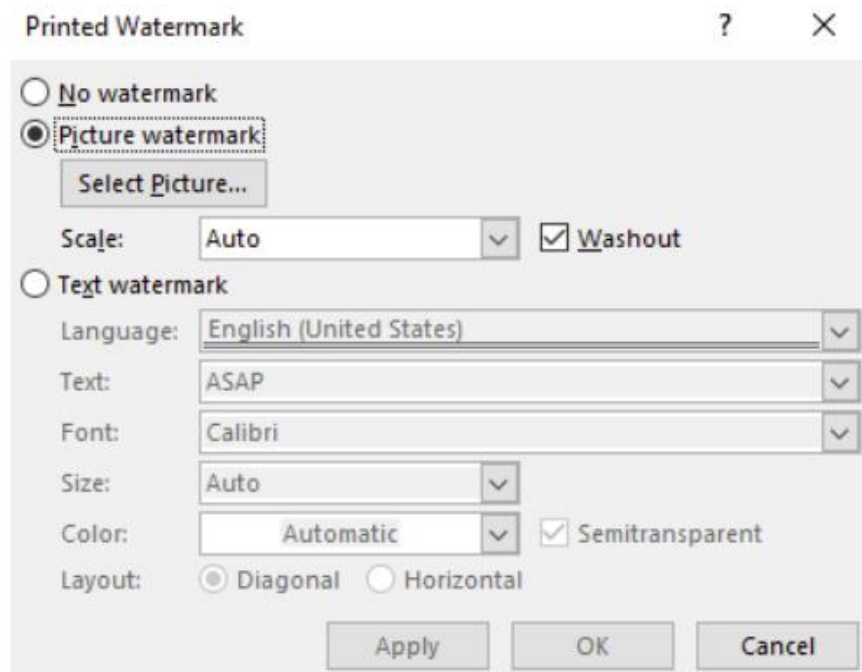

Inserting a Watermark

- Choosing a watermark from the menu will apply it to every page in the document.
- To change the text of the watermark, click **Custom Watermark...** at the bottom of the Watermark menu to open the Printed Watermark dialog box.
- Here, you can customize the text and appearance of the watermark. Unchecking the semitransparent box will make the watermark more visible (although the watermark will still not obscure the text).

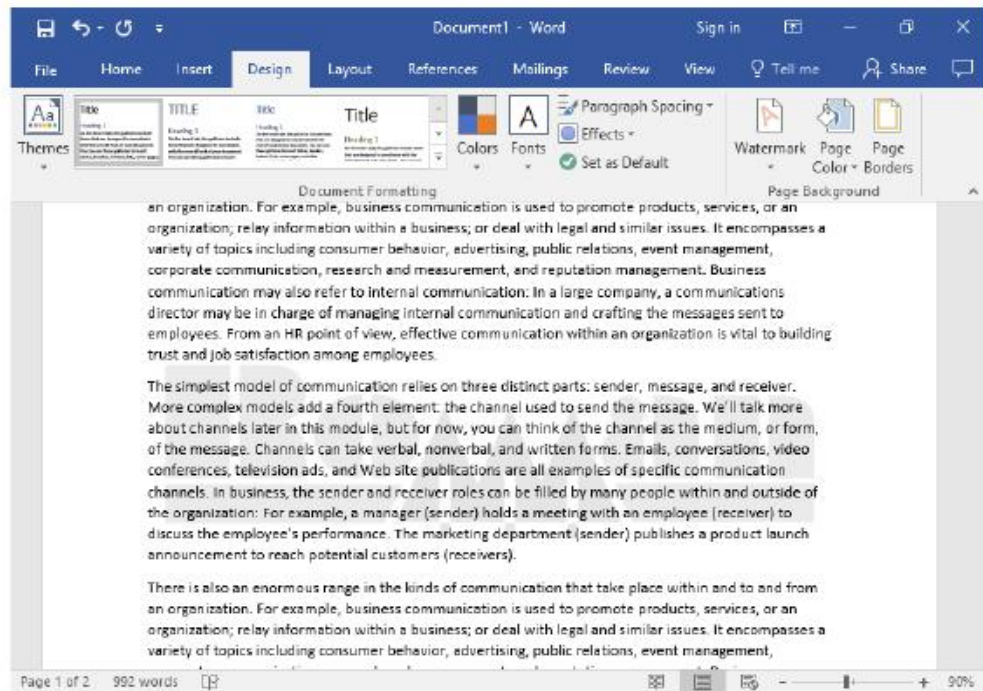

Inserting a Picture Watermark

- To add an image as a watermark, go to Design>Watermark>Custom watermark... and select the Picture watermark in the Printed Watermark dialog box.

Inserting a Picture Watermark

Headers and Footers

Headers and Footers

- A header is text that is placed at the top of a page, while a *footer* is placed at the bottom, or foot, of a page.
- Typically, these areas are used for inserting document information, such as the name of the document, the chapter heading, page numbers, creation date and the like.

Headers and Footers

- *Headers* are located in the margin area at the top of the page.
- *Footers* are located in the margin area at the bottom of a page.
- Headers and footers generally contain document information, such as the file name, author, date created, page numbering and the like.
- This information is repeated on each page and thus enables the reader to easily navigate the document.

Inserting Headers and Footers

1. Go to **Insert > Header** or **Footer**.
2. Choose the header style you want to use.
3. Add or change text for the header or footer.
4. To edit a header or footer that's been already created, double-click on it.
5. To eliminate a header--like deleting it on the title page--select it and then check the **Different First Page** box.
6. Select **Close Header and Footer** or press Esc to exit.
 - To delete, select **Insert > Header** (or **Footer**) > **Remove Header** (or **Remove Footer**).

Using References in MS Word

What is a bibliography?

- ***Bibliography*** refers to the list of books and journals referred to by the researcher in writing his or her thesis or dissertation.
- It contains the list of the books in an alphabetical order either showing the titles of the books or the names of the authors of the books.
- The main purpose of compiling the bibliography is to let the reader know the books and journals you have referred to as a researcher in writing your thesis or dissertation.
- A bibliography is a list that contains all the sources the writer has used when he or she was writing the paper.

Example of a bibliography

APA:

Bibliography

Martin, G. B. (2014). *The Stormy Night*. New York: Cyclone Publishers.

What is a Citation?

- A citation is how you quote the source of the ideas within the body of the research paper.
- A citation is usually put at the end of the sentence within brackets.
- Generally, this citation includes information such as the author's surname, date of publication or the page number in which the part you have taken the idea appears in the original book.
- This citation method also changes according to the format you are following.

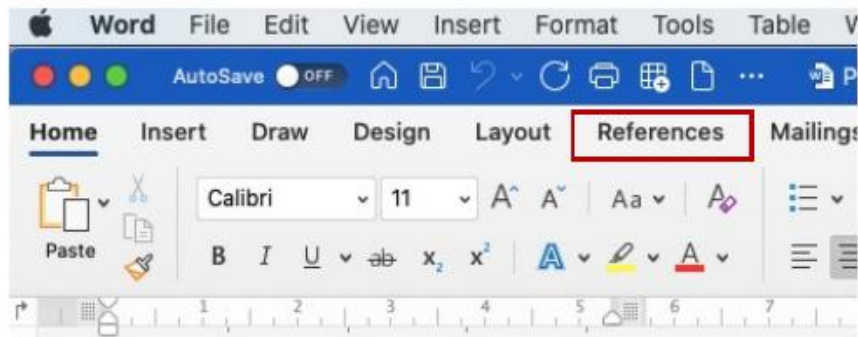

What is a Citation?

- The purpose of citation is intellectual honesty.
- You want to give due credit to a particular author for the quotation you have picked from his work in support of your work.
- Citation occurs at various places wherever there are relevant quotations.

APA – 'Her past would not let her be at peace (Martin, 2014).'

MLA – 'Her past would not let her be at peace (Martin 251).'

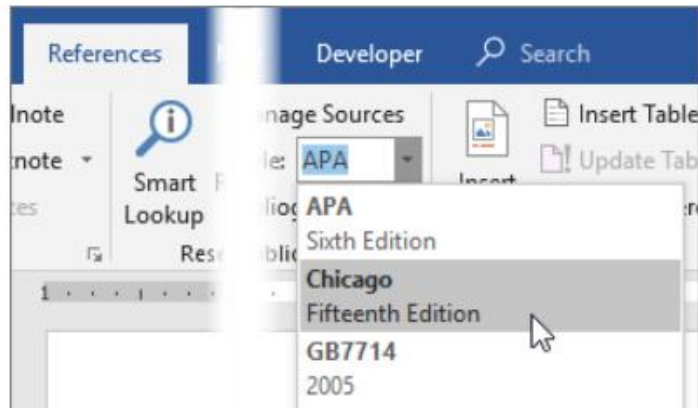

Using References in MS Word

- Word has its own, basic referencing system available via the 'References' tab on the ribbon.
- This lets you add references to a document and then create a bibliography at the end of the text.
- References are stored in a master list, which can be used to add references to further documents.

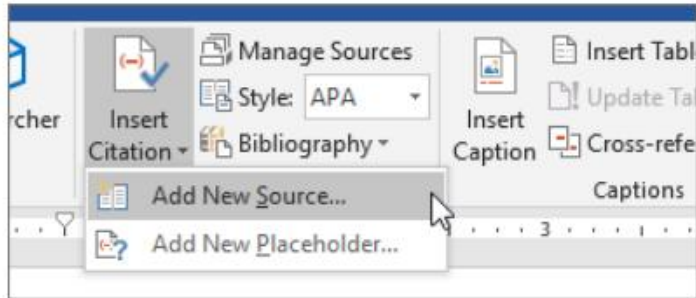

Steps:

1. Put your cursor at the end of the text you want to cite.
2. Go to **References** > **Style**, and choose a citation style.

Steps:

- 3. Select **Insert Citation**.

What is Mail Merge?

- The Oxford Dictionary defines mail merge as:
- the automatic addition of names and addresses from a database to letters and envelopes in order to facilitate sending mail, especially advertising, to many addresses.

Steps in Performing Mail Merge

- Set up and Choose Document Type
- To begin the mail merge process, you first need to choose what sort of document you want to create.

STEP 1: Click Mailings from MS Word Tabs

STEP 2: Click Start Mail Merge → Click Letters

STEP 3: Click Select Recipients

STEP 4: Click Use an Existing List

STEP 5: Locate the file that contains the data for Mail Merge.

Preview results by clicking the “Preview button” in the ribbon.

Steps in Performing Mail Merge

- If the previous steps does not work, refer to this link:
- <https://www.customguide.com/word/mail-merge-word>

Activity:

- 1. Perform Mail Merge in a Certificate.
- 2. Insert a watermark in a document.
- 3. Perform "Find and Replace" Feature.
